### **Nord/LB wins Best Access Governance Award based on Beta Systems IAM Suite**

**Berlin, Germany. 7 May 2015 – The European Identity & Cloud Awards 2015 were presented last night by KuppingerCole at the 9th European Identity & Cloud Conference (EIC). In the category Best Access Governance / Intelligence Project, the award was granted to Nord/LB for implementing an IAM project focusing on realizing a modern, workflow-structured and role-based IAM system based on the Beta Systems' IAM suite that mitigates existing risks and improves governance capabilities. An important element within its design and deployment was a clear segregation between management of identities and access and the technical operation. The solution was implemented by Beta Systems long-time IAM solution partner BLUECARAT.**

These awards honor outstanding projects and initiatives in Identity & Access Management (IAM), Governance, Risk Management and Compliance (GRC), as well as Cloud Security. Numerous projects have been nominated by vendors and end-user companies during the last 12 months. Winners have been chosen by KuppingerCole analysts from among the most outstanding examples of applications and ideas in the areas of IAM, GRC, and Cloud security.

Beta Systems is the largest independent European provider of enterprise Identity and Access Management solutions and has some 30 years of experience behind it. Tailored to the needs of mid-sized and large companies, its solutions are developed specifically to be compliant with European regulations, saving both time and compliance costs for its customers.

Further information about Beta Systems' IAM solutions is available at <http://www.betasystems-iam.com>.
